

# Connecting to Centennial Park Wireless

Once in the park, enable your wireless card. In under a minute, you should see the wireless network **"Metro-Parks."** In *windows wireless* or *wireless card client utility*, screen will show that the wireless network is unsecured. If you wish to connect to it, select **yes**.

Once associated with the **"Metro-Parks"** network, the connection can be verified in the windows wireless setting that should appear by the clock or the wireless card utility.

Open your browser and you will be directed to the wireless disclaimer page.

After reading the disclaimer and accepting the terms, enter email address. Select the check box and on your keyboard hit enter. You will be directed to the Parthenon website. Now you are able to freely browse the web. If you are unable to connect to the wireless network and you are using a vendor's wireless client utility, please consult vendor documentation.

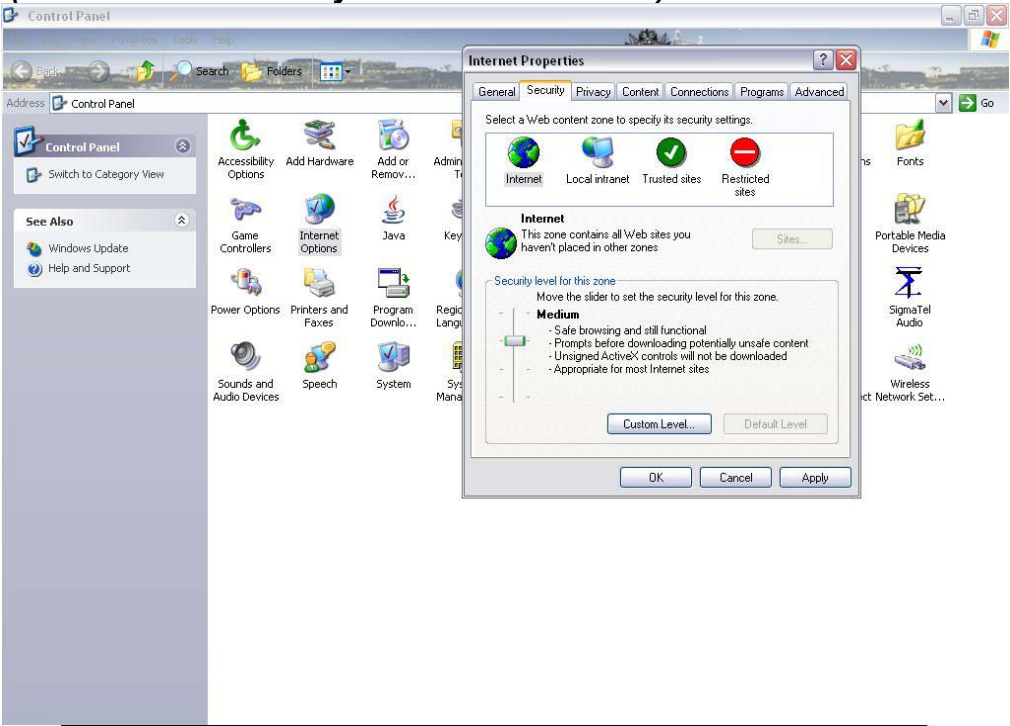

Issues also can be caused by Internet security applications.

If your network is associated but not showing a login page, try the following troubleshooting technique for issues surrounding IE version 6:

If using internet explorer for browser, check your Internet Properties by going into the control panel. Click start. Go to settings (depending on Windows version this step could be skipped). Go to Control Panel.

Internet Options

1. Go to **Security Tab** and verify "**Internet**" web content zone settings  
Click the **Internet** Icon and select **Custom level** or click the **Default Level** *(this will automatically set level to medium)*

2. If this doesn't allow you to connect to the internet, verify the **Privacy Tab** options. Setting should be on **medium**. You can change the setting by moving the slide bar or clicking the "**default button**"
